

We have a very clear mission

TO TRANSFORM USER BEHAVIOUR

Digital security for humanity

We believe that digital technologies will help improve many aspects of our lives. But we are also certain that in the absence of a correct attitude in their use, there could be more shadows than light. This is why we are committed to making humanity more cyber secure.

Cyber Guru enables organisations to train and educate their employees in the proper use of digital technologies, thereby increasing the level of protection for individuals and organisations.

Cyber Guru is a comprehensive and highly effective Cyber Security Awareness SaaS training platform that, thanks to its training paths based on the most advanced methodological learning techniques and its unique Machine Learning model, is able to transform the human factor from a weak link in the defensive chain to the front line of defense against cybercrime. The training platform is designed to maximise the effectiveness of training contribution, minimise dispersal effects, and negate management costs. All of this has contributed to more than 500 companies choosing Cyber Guru to minimise cyber risks.

THE THREE TRAINING PROGRAMMES

Cyber Guru Awareness

The cognitive educational programme is based on a permanent training methodology, which guarantees the gradual development of awareness through knowledge of network threats and the behaviour needed to prevent attacks.

Cyber Guru Channel

The inductive training programme that, thanks to the strength of a narrative scheme akin to that of a TV series, generates in the learner the ability to learn through identification within real life situations.

Cyber Guru Phishing

The automatic and adaptive experiential training programme, with an anti-phishing function, provides personalised training based on individual experiences and the individual level of resistance to attacks.
