Smart Banners

REAL-TIME EMAIL AWARENESS
THAT TRANSFORMS HUMAN BEHAVIOUR

Awareness training lays a solid foundation for secure behavior, but today's threats demand more.

Email remains a primary attack vector – BEC, phishing, and ransomware continue to slip past traditional defenses like secure email gateways and proxies.

At the same time, your employees make security-sensitive decisions every day as they read, click, and download. To embed secure habits, and minimize human error, regardless of awareness level, they need real-time guidance - right at the moment of risk.

Smart Banners add a real-time awareness layer to inbound emails, past your secure email gateway or proxy.

Analysing multiple datapoints, they highlight suspicious elements, impersonation attempts, and risky attachments, helping employees make safer decisions at the point of risk.

Real-Time Awareness Inside the Inbox

Powered by deep analysis
Leverages over 40 datapoints and optional AI/LLM analysis per email for highly accurate and contextual awareness.

Extensive threat coverage
Raises awareness for possible impersonation attempts, credential theft, and other phishing tactics.

Flags risky attachments
Highlights potentially dangerous files to prevent accidental downloads and reduce malware exposure.

Designed for simplicity, not disruption
Intuitive, colour-coded in-email alerts draw users' attention without interrupting their workflow, making it easy to understand risks and act with awareness.

User-driven threat reporting
Users can report suspicious emails with a single click, creating a direct feedback loop with the SOC team.

Compatible with leading email platforms
Seamlessly integrates with Microsoft 365, Online Exchange and Google Workspace.

Available on every device
Supports desktop, mobile, and tablet use, ensuring coverage wherever employees read their email.

Fast, simple deployment
Just two clicks to roll out across your organization, no complex setup.

Track progress and demonstrate impact
Dashboards and reports provide actionable insights and demonstrate impact.

Real-Time Email Awareness Features

REAL-TIME WEB AWARENESS

- Employee and brand impersonations
